# BES Virtual Roundtable on “Foundational Science to Accelerate Nuclear Energy Innovation”

July 20-22, 2022

---

*Co-Chair: Blas Uberuaga  
Los Alamos National Laboratory*

*Co-Chair: Marianne Walck  
Idaho National Laboratory*

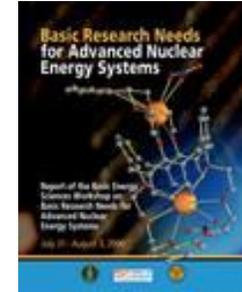

*Co-Chair: Rebecca Abergel  
University of California Berkeley  
Lawrence Berkeley National Laboratory*

Briefing to the Basic Energy Sciences Advisory Committee - December 7, 2022

# Previous DOE Reports and Initiatives

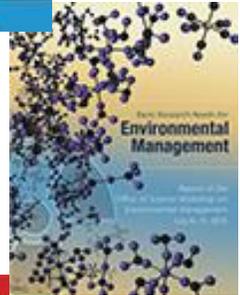

## **BES** Basic Research Needs for **Advanced Nuclear Systems**

August 2006; Co-Chairs: Jim Roberto (ORNL) and Tomas Diaz de la Rubia (LLNL)

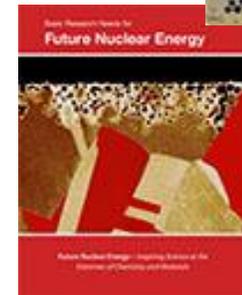

## **BES** Basic Research Needs for **Environmental Management**

July 2015, Co-Chairs: Sue Clark (PNNL/WSU), Michelle Buchanan (ORNL), Bill Wilmarth (SRNL)

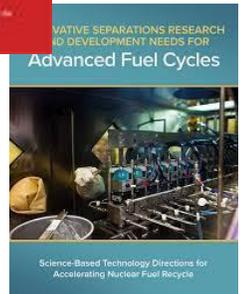

## **BES** Basic Research Needs for **Future Nuclear Energy**

August 2017, Co-Chairs: Kelly Beierschmitt (INL), Michelle Buchanan (ORNL), Aurora Clark (WSU), and Ian Robertson (UW Madison)

## **NE** Innovative Separations R&D Needs for **Advanced Fuel Cycles**

August 2021, Co-Chairs: Bruce Moyer (ORNL) and Gregg Lumetta (PNNL)

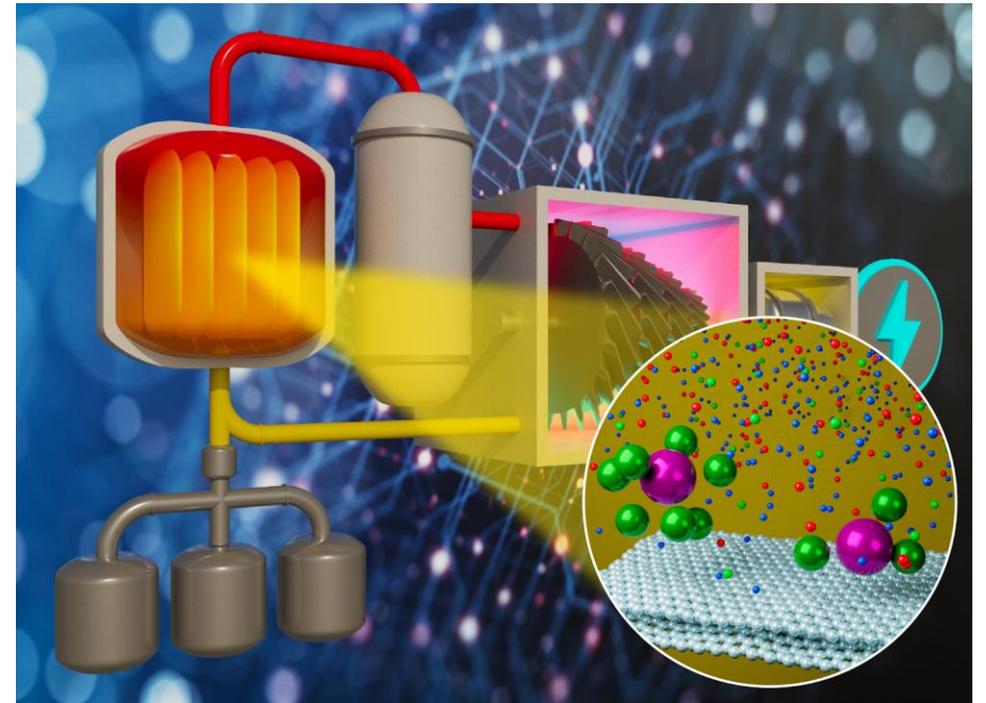

# Roundtable on Foundational Science to Accelerate Nuclear Energy Innovation – July 20-22, 2022 (Virtual)

**Organized by SC-BES in coordination with NE, SC-FES and SC-ASCR**

**Goal:** Identify the key underpinning science needs and priority research opportunities that will accelerate research, development, and deployment of nuclear energy systems, including both fission and fusion

**Scope:** Assess the status of the field and identify the fundamental science bottlenecks and gaps in the fundamental understanding that limit innovation in current nuclear technologies

**Participants:** A diverse group of up to 35 participants, representing labs, universities, and other stakeholders

# Roundtable Background and Plenary Speakers

## Technology Status Document Webinar

Simon Pimblott, INL

Grace Burke, ORNL

## Welcome Comments

Asmeret Asefaw Berhe, DOE SC

Kathryn Huff, DOE NE

## Opportunities for Advanced Computing in Accelerating Nuclear Energy Innovation: Reflections from CASL and Exascale

Doug Kothe, ORNL

## Commercial Perspective on Future Research Needs

Christine King, INL

# Roundtable Panels

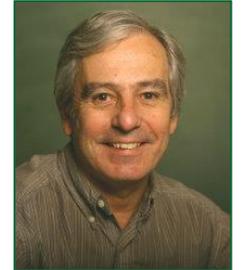

- ▶ **Materials Discovery and Resilience**

Panel Lead: Janelle Wharry, Purdue

- ▶ **Physical Processes and Chemical Evolution**

Panel Lead: Jay LaVerne, Notre Dame

- ▶ **Spectroscopic Signatures and In Situ Sensing**

Panel Lead: Arianna Gleason, SLAC

- ▶ **Cross-Cutting Computational Research**

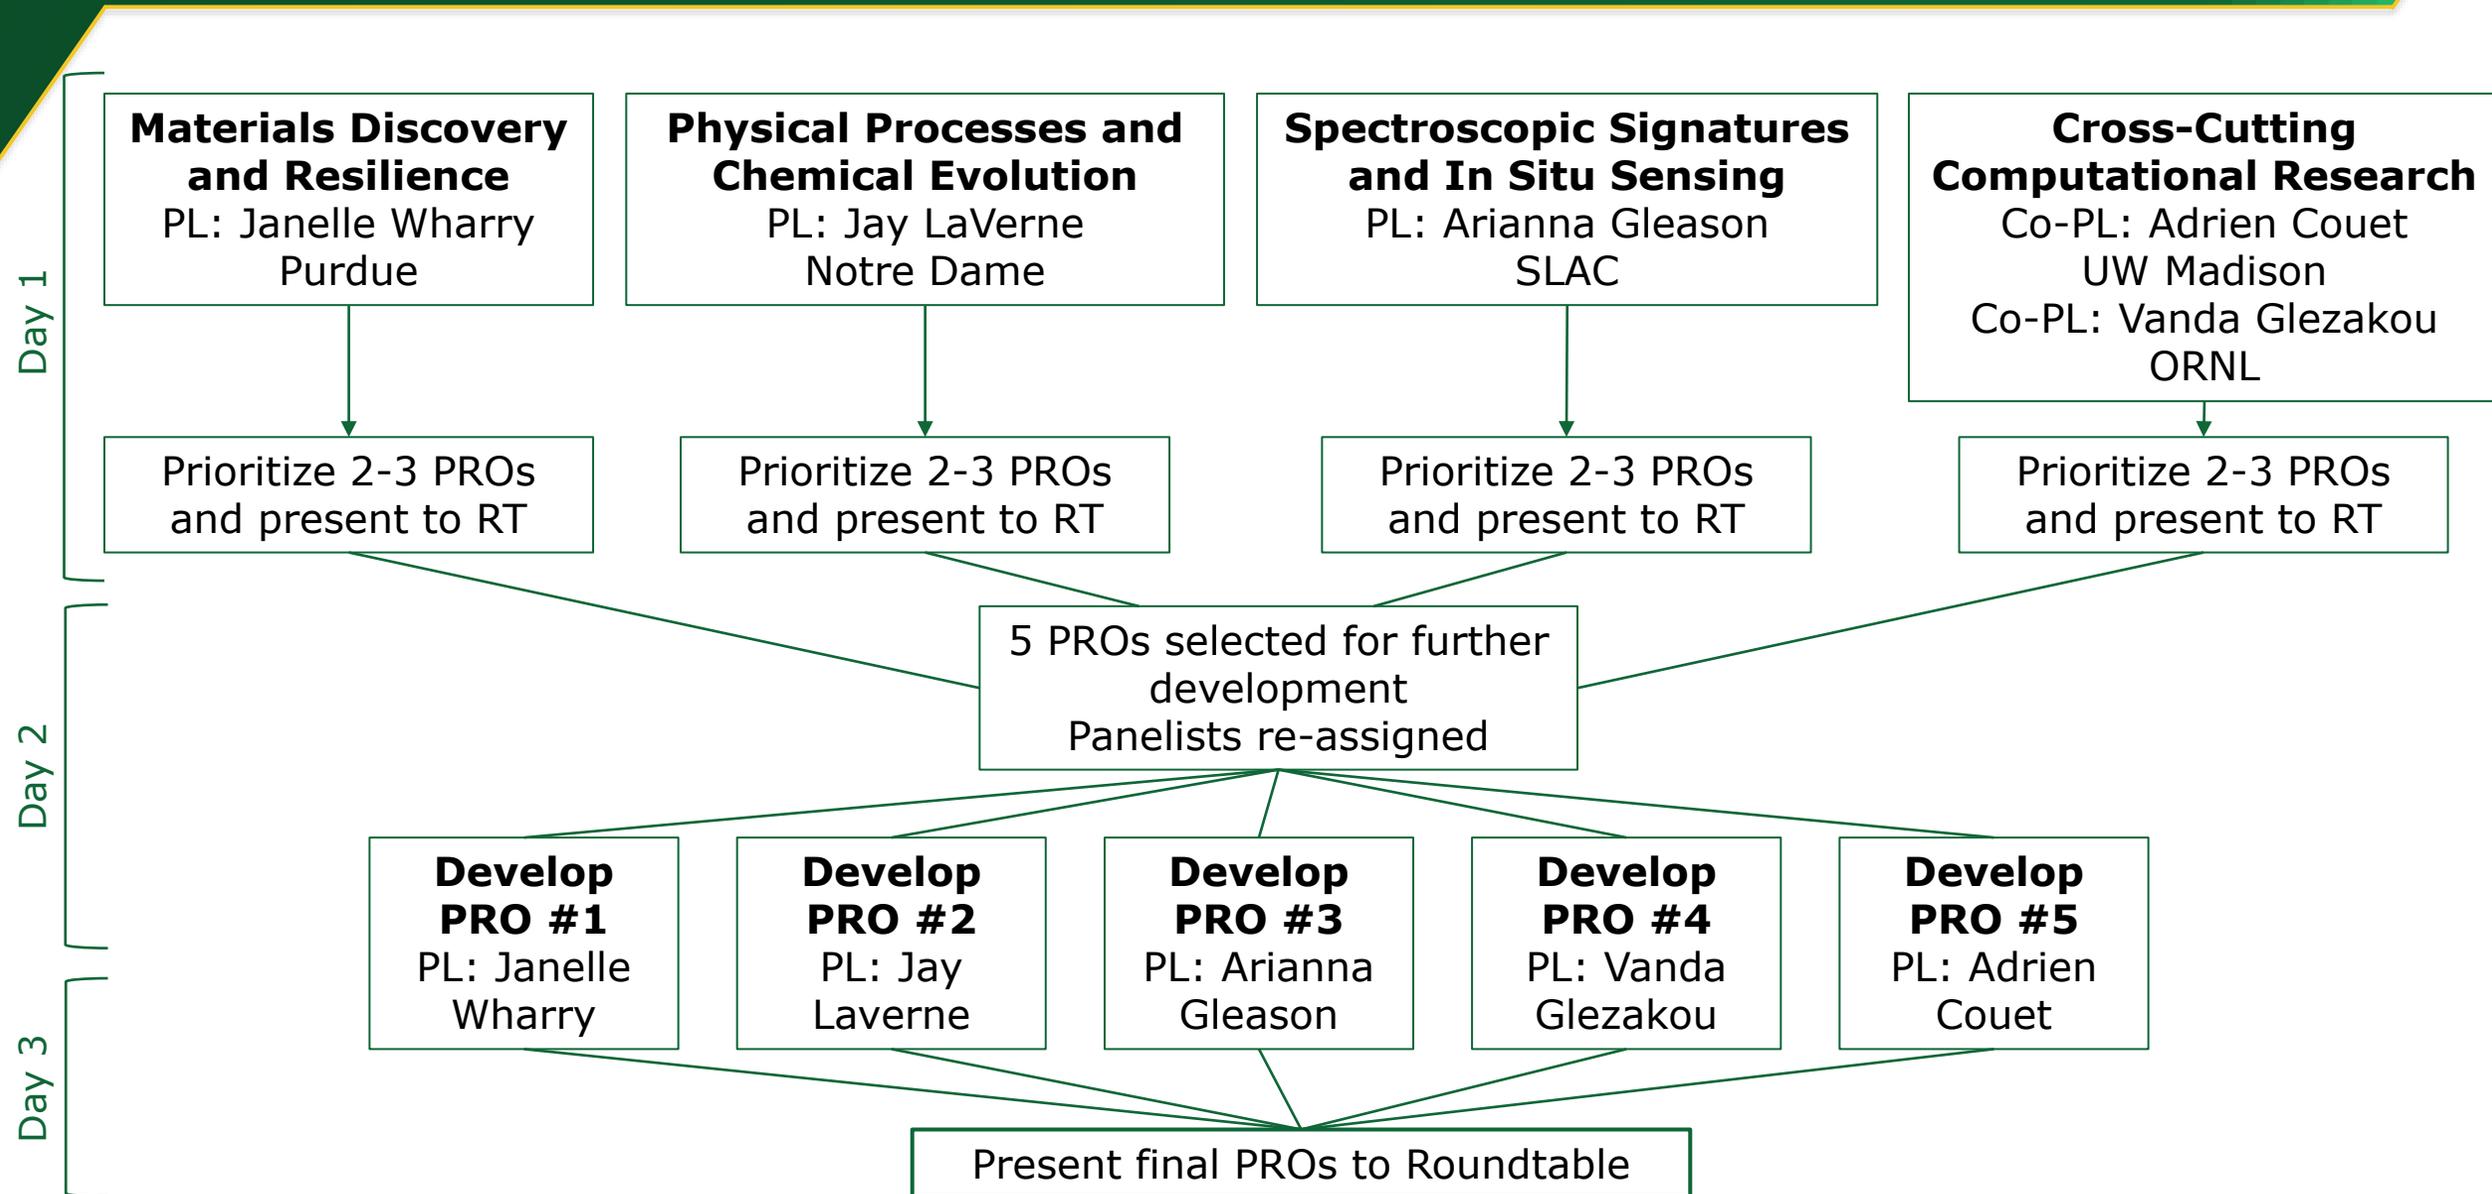

Panel Co-Leads: Adrien Couet, UW Madison

Vanda Glezakou, ORNL

\*Roundtable participants represented Universities (16) and National Laboratories (13)

# Path to define Priority Research Opportunities (PROs)

# Panelists Re-Aligned to Finalize Five PROs

## **PRO #1**

Complex  
electronic  
structure in  
novel materials

Lead: Wharry

## **PRO #2**

Next  
generation  
coolants and  
solvents

Lead: LaVerne

## **PRO #3**

Complex  
interfaces in  
nuclear  
environments

Lead: Glezakou

## **PRO #4**

Novel  
techniques to  
probe dynamic  
behavior

Lead: Gleason

## **PRO #5**

AI for self-  
resilient  
condensed  
phases

Lead: Couet

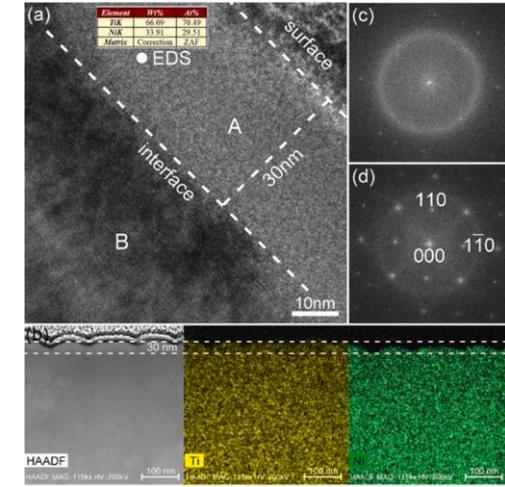

# Priority Research Opportunities to Advance Foundational Science for Nuclear Energy Innovations

## PRO 1: Master complex electronic structures to tailor thermochemical reactivity, transport, and microstructural evolution

**Key question:** How do we elucidate, predict, and harness coupled electron-ion dynamics to enable discovery and deployment of novel materials, coolants, and solvents for future fission and fusion energy?

## PRO 2: Interrogate and direct the physics and chemistry underpinning next generation coolants and solvents

**Key question:** How can we probe and control the physics and chemistry of coolants, solvents and their solutions in the harsh environments associated with nuclear energy?

[DOI: 10.1016/j.intermet.2021.107305 ]

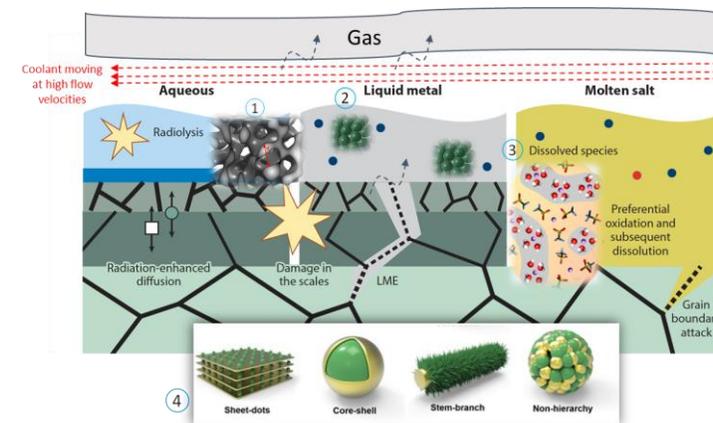

[DOI: 10.1002/chem.201904677]

# Priority Research Opportunities to Advance Foundational Science for Nuclear Energy Innovations

## PRO 3: Elucidate and control the underlying physics and chemistry of interfaces in complex nuclear environments

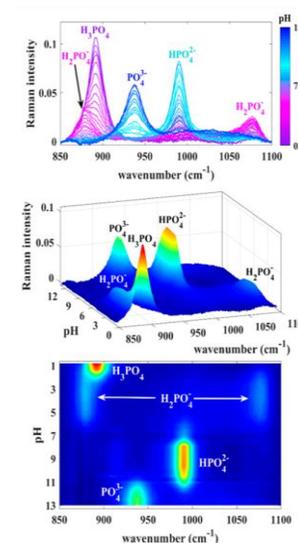

**Key question:** How do we harness dynamic interfaces to tailor robust materials and processes for next generation nuclear reactors?

[DOI: 10.1002/adma.202100855]

## PRO 4: Bridge multi-fidelity, multi-resolution experiments, computational modeling, and data science to control dynamic behavior

**Key question:** Which novel techniques can be coupled to provide operando and in situ measurements to better understand and control dynamical properties, behaviors, and processes for extreme nuclear energy environments?

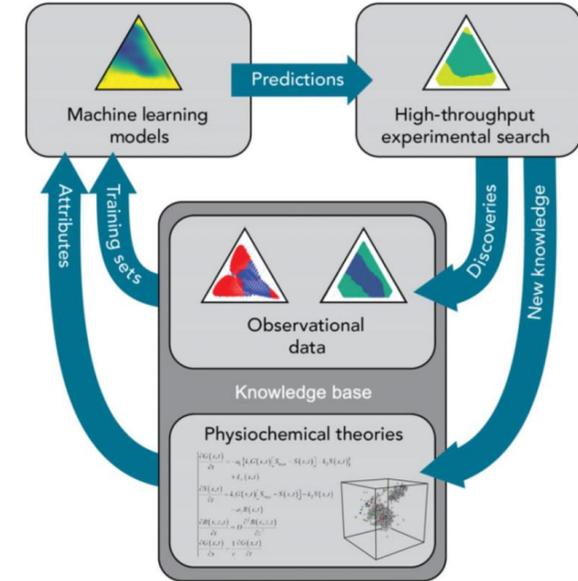

[DOI: 10.1021/acs.analchem.9b05708]

# Priority Research Opportunities to Advance Foundational Science for Nuclear Energy Innovations

## PRO 5: Harness artificial intelligence to design inherently resilient condensed phases

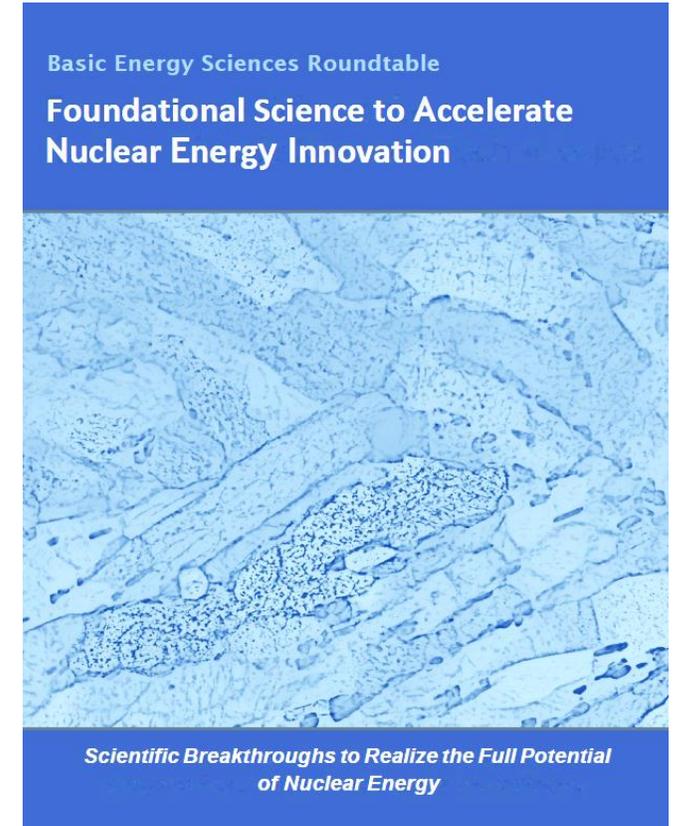

**Key question:** What defines self-resilient mechanisms and how can they be discovered in nuclear materials and chemical systems in coupled extreme environments?

[DOI: 10.1126/sciadv.aag1566]

# Status of Outcomes

- ▶ **Target Brochure Release:** December 2022
- ▶ **Target Report Release:** February 2023
- ▶ **Technology Status Document:** February 2023
- ▶ **Output:** A public report describing Priority Research Opportunities that identify fundamental science needs to overcome technological barriers to advanced nuclear energy systems, including both fission and fusion.
